HOW TO ADJUST YOUR ROUTING PREFERENCES:

If your navigation system is not routing you in the way you expected or is taking unusual routes – be sure to check your navigation settings as this may be the issue. There are a few ways to do this:

1) While you are entering any destination:

a. When you get to the final screen to 'GO' - press Route Options to ensure you have the preferred settings for that particular destination (your system may default to this setting on the next route)

2) Within the Navigation Settings:

- a. While in 'Navigation' Mode Select 'Settings
 - i. Within Settings you can Avoid certain things on your Route such as Carpool lanes
 - ii. If you press 'More Settings' you can change your:
 - 1. Preferred Route (Fastest or Eco Friendly)
 - 2. Check 'Traffic Preferences'

(note: If you have certain Onstar services- there may be traffic information coming in via Onstar that may also impact the route the system selects)
